AB The synthesis of radically polymerizable derivs. of cholic acid contg. a
 methacrylic group directly attached to C-3 or via a C11 cinnamic ester
 spacer is described. The monomers form monolayers, vesicles, and
 micelles. In vesicles and in micelles the monomers undergo neither
 photodimerization via the cinnamoyl group nor do they polymerize, but they
 photodimerize in an amorphous film and polymerize in isotropic soln.
